AIRBNB PROPERTY MANAGEMENT PROJECT

Using Tableau 

BY SAYYED NIDA

ABOUT

Airbnb is a global online platform that connects hosts—individuals or property managers—with guests seeking short- or long-term stays, as well as local experiences and services. Founded in 2008 in San Francisco by Brian Chesky, Joe Gebbia, and Nathan Blecharczyk, it began when the founders rented out air mattresses in their living room during a design conference .

Today, Airbnb offers millions of unique stays—everything from spare rooms and apartments to treehouses and castles—in over 220 countries. It also provides “Airbnb Experiences” and, increasingly, on-demand services like chefs or massages, aiming to evolve into a broader services marketplace.

In essence, Airbnb operates as a two-sided marketplace: hosts list their space for free, and both hosts and guests pay modest service fees per booking, while Airbnb handles payments, messaging, support, and trust systems. It's become a household name in travel—often used as a verb—transforming how people travel, stay, and explore the world.

PROBLEM

You are working as a Data Analyst at Airbnb, and Airbnb aims to develop a Tableau dashboard to optimize rental strategies, enhance customer satisfaction, and maximize revenue for property owners.

STATEMENT

Your role is to analyze Airbnb's dataset and generate valuable insights that will help improve decision-making for both Airbnb and its hosts.

Listings Overview

- Overall Market Size: There are 5 cities, 44,565 listings, 4 property types, and 195 neighborhoods included in this dataset.
- City Dominance: Rome has the highest number of Airbnb listings by a significant margin, followed by Milan, Firenze, Venezia, and Napoli.
- Neighborhood Concentration: The "I Centro Sto." (presumably Centro Storico) neighborhood has the most listings, indicating a high concentration of Airbnb activity in central areas. Other neighborhoods like "VII San..." and "Castello" also have a notable number of listings.
- Property Type Preference: "Entire home" is by far the most common property type available, vastly outnumbering private rooms, hotel rooms, and shared rooms. This suggests a strong preference for whole-unit rentals among hosts or guests in these regions.
- Seasonal Trends: "Early Winter" and "Early Spring" appear to be the seasons with the most listings, suggesting higher demand or host availability during these periods. "Early Summer" and "Early Autumn" have fewer listings.

INSIGHTS

Pricing Insights

- **Average Price by City:** Venice (Venezia) and Firenze (Florence) have the highest average Airbnb prices, while Napoli (Naples) has the lowest. Milan and Rome have moderate average prices.
- **Top Expensive Listings:** The listing with ID "40577782" is an extreme outlier, priced significantly higher than any other listing in the dataset (over 350,000 units of currency). The next most expensive listings are around 100,000 units. This suggests a unique, luxury, or miscategorized listing.
- **Price vs. Ratings:** There's a general trend of a high density of listings with good rating scores at lower price points (below 20,000 units). As prices increase, the density of listings decreases, and while there are still well-rated properties, there's a wider spread of ratings for higher-priced listings. There are also some listings with very high prices (e.g., above 50,000–60,000) that still maintain high rating scores.

INSIGHTS

Host Insights

- **Superhost vs. Regular Host Distribution:** A significant majority (62.70%) of hosts are regular hosts, while 37.30% are Superhosts.
- **Top 5 Hosts (by Listings Count):** Hosts who joined in 2015 have the highest number of distinct listings, followed by 2014, 2016, 2013, and 2017. This suggests a peak in new hosts or listing creation around the 2014–2016 period.
- **Superhost Impact:** Superhosts tend to have a slightly lower average price for their listings compared to regular hosts, but they achieve a significantly higher average rating score. This suggests that while Superhosts might price competitively, their primary advantage lies in providing superior guest experiences, leading to better reviews.
- **Host Since Trend:** The number of hosts joining Airbnb peaked around 2015 and has been declining steadily since 2017, with a sharp drop-off from 2020 onwards. This could indicate market saturation, stricter regulations, or a shift in host behavior.

INSIGHTS

Rating & Review Analysis

- **Overall Average Rating:** The average rating across all listings is quite high at 4.721, indicating a generally positive guest experience on Airbnb.
- **Average Rating by Property Type:** All property types (Entire home, Private room, Hotel room, Shared room) have consistently high average rating scores, suggesting that guests are generally satisfied regardless of the property type.
- **Average Ratings by Category:** "Cleanliness score," "Average Rating score," and "Average Value for money score" all consistently hover around 4.5, indicating a good performance across these key rating categories.
- **Review Frequency:** A few specific listings (e.g., "54234294," "37706095") have a very high number of reviews, suggesting they are popular or frequently booked. The number of reviews drops off significantly for most other listings.
- **High-Rating Budget Listings:** There are numerous listings available at relatively low prices (under 100 units) that still maintain a high "Value for money score" (often between 15–20), indicating good deals for budget-conscious travelers. As the price increases, there are still listings with high value for money, but they become less concentrated.

INSIGHTS

Amenities & Property Features

- **Bedroom Distribution:** The vast majority of listings are "1 Bedroom" (34,006), followed by "2 Bedrooms" (14,389) and "3+ Bedrooms" (6,032). This indicates a strong preference for smaller units, likely catering to couples or small groups.
- **4+ Guests by City:** Rome has the highest number of listings accommodating 4+ guests, followed by Milan, Firenze, Venezia, and Napoli. This aligns with Rome also having the most overall listings.
- **Property Type by Neighborhood:**
 - "Entire Home" is dominant in central neighborhoods like "I Centro Sto." and "Centro Stor."
 - "Private Room" listings are more spread out across various neighborhoods, with notable numbers in "I Centro Sto.", "Castello", and "Il Parioli/No."
 - "Hotel Room" and "Shared Room" listings are significantly less common across all neighborhoods compared to "Entire Home" and "Private Room."
- **Bathroom Type:** "Private" bathrooms are overwhelmingly more common (41,109 listings) than "Shared" bathrooms (3,769 listings), suggesting guests highly prefer private facilities.
